

How to setup your Email

- 1) From the main window, click on Tools, and then click on Preferences.

The screenshot shows a 'Preferences' dialog box with three main sections: Proxy settings, Parsing, and Email settings. The 'Email settings' section is currently selected and contains several input fields and checkboxes.

Proxy settings

- ☐ Connect using a HTTP proxy
- Host:
- Port:
- Login:
- Password:

Parsing

- Number of threads to use:
- ☒ Remove HTML tags from description:

Email settings

- ☒ Use Embedded Email Client
- From:
- SMTP server: Port:
- Username:
- Password:
- ☐ StartLS

At the bottom of the dialog are two buttons: 'Cancel' and 'Save & Close'.

- 2) Put a check besides "Use Embedded Email Client".
- 3) Type in your mail server information on the boxes provided.

Preferences

Proxy settings

☐ Connect using a HTTP proxy

Host: Port:

Login: Password:

Parsing

Number of threads to use:

☒ Remove HTML tags from description:

Email settings

☒ Use Embedded Email Client

From:

SMTP server: Port:

Username:

Password:

☒ StarTLS

Cancel Save & Close

NOTE:

- Please contact your mail server administrator in case you are not aware of your SMTP server and port number as this is different from every mail service provider or Google the server (ex. "yahoo smtp server and port number").
- In case your email needs you to connect securely to your mail server before sending an email, please click on the box besides StarTLS to make it work.

4) After putting the values, click on Save & Close. A popup window should open and then just click on OK.
